PROTO BRAND TOOLS START ON PAGE 14

PRICES EFFECTIVE: FEBRUARY 10, 1979

IMPORTANT

SAFETY RULES FOR HAND TOOL USE

- Always use the right size and type of tool for the job being done. Keep tools in proper working condition. Never alter a tool from its original condition.
- Protect your eyes. Always wear safety goggles when using tools; particularly when using punches, chisels, hammers, power tool attachments and cutting tools.
- Ordinary plastic dipped handles are designed for comfort—not electrical insulation.
- Never use a tool as a hammer unless manufactured for that purpose.
- When possible, always pull on a wrench handle rather than push and adjust your stance to prevent a fall.
- Never use a pipe extension or other form of "cheater" to increase the leverage of any wrench. Never use a hammer on any wrench, other than a striking face wrench that is designed to be struck.
- Adjustable wrenches should be tightly adjusted to the nut and pulled so that the force is on the side of the fixed jaw.
- Never use a pipe wrench to bend, raise or lift a pipe.
- Chrome finished hand sockets and attachments should not be used on power tools. Black oxide finished sockets and attachments are designed for use on electric and air powered driving tools and may also be used for hand operation.
- Select a wrench or socket whose opening exactly fits the nut. Always seat the wrench or socket straight on the nut—do not cock the tool when turning.
- Use the correct drive size handles and attachments with sockets.
- Ratchet mechanisms should be cleaned and lubricated periodically with light grade oil.
- Pliers should not be used for cutting hardened wire unless manufactured for that purpose. Always cut at right angles—don't rock from side to side when cutting.
- Always strike squarely with the hammer striking face parallel to the surface being struck. Avoid glancing blows and over and under strikes. Never strike an object with the side of a hammer. Do not strike one hammer with another hammer.
- Keep hammer heads tight on the handle. Never use a hammer with a loose or damaged handle.
- Metal cutting chisels are intended for cutting, shaping and removing metal softer than the cutting edge itself. Never use these tools for cutting or splitting stone or concrete.
- Always strike the struck face of a chisel or punch squarely. The striking face of the hammer should have a diameter approximately 3/8" larger than the struck face of the punch or chisel.
- Never use a chisel or punch with a dull, chipped, deformed cutting edge or point or mushroomed struck face.
- Use the right type of screwdriver with the right tip for the screw. Make sure the tip fits the screw slot, not too loose and not too tight.
- Never use screwdrivers with rounded edges or tips.
- Never use a screwdriver as a chisel, punch, scraper or pry bar. Use screwdrivers for screw driving only.
- Do not use screwdrivers with split or broken handles.
- Do not heat jaws of pullers when heating bearings or gears, as heating can change their temper. Do not use pullers with worn or damaged parts.
- Puller forcing screws should be kept clean and lubricated with medium grade oil. Puller should not be cocked at an angle when in use.
- When using slide hammer pullers, be sure hands are well away from hammer on the back end of the slide rod.
- Ingersoll-Rand Company, PROTO Tool Division cannot be responsible for injury or damage caused by tools improperly used, or from tools which have been abused or badly worn.

GUARANTEE

Proto Tool Division manufactures and markets professional hand tools of quality and value as a matter of policy. Therefore, any Proto or Challenger product which has not been artificially altered or abused and which fails during its normal useful life to perform satisfactorily will be repaired or replaced at no charge.

ABOVE SAFETY RULES APPLY TO ALL PRODUCTS OF:

INGERSOLL-RAND COMPANY
